

AMENDMENTS TO THE ABSTRACT

Please replace the section entitled "Abstract of the Disclosure" beginning on page 78 at line 4 with the following replacement section:

21 A system and method are disclosed for detecting and processing attacks on a computer network. Data indicating an attack may be taking place is received. The data is associated with an event. The data is placed in a selected one of a plurality of queues of data to be processed. The data in the queue is processed. Each queue is configured to store one or more sets of data, each set of data being associated with an event to be processed. An administrative domain may be notified that an attack may be taking place. The destination administrative domain may or may not be associated with other than the sending administrative domain. The source of an attack may be identified. Messages associated with an attack may be tracked back to identify a point of attack at which messages associated with the attack are entering a network.
